

Protect loved ones with a medical alert system

WH Security offers a medical alert system to protect you or your loved ones during emergencies.

The medical alert system includes two parts: a two-way calling station ordinarily placed beside a bed, and an emergency button that is worn as a necklace, belt clip or bracelet.

If an incident occurs, the emergency button either on the two-way calling station or the worn device should be pushed. When the emergency button is pushed, an alarm signals WH Security's monitoring center, notifying an emergency responder immediately.

Our trained dispatchers then attempt to communicate with you or your loved one via the two-way calling station. If they do not get a response from you, or determine that you do need care, emergency personnel are dispatched.

Medical alerts include free in-home installation, service calls, and around-the-clock assistance in any emergency. Provide you or your loved one piece-of-mind knowing that WH Security's medical alert system connects you to the most dependable emergency support, 24 hours a day.

Homeowner saves energy using Control My Home

WH Security offers an interactive add-on to your security system called Control My Home. Through the use of this system, a user can take advantage of controlling their home's security system, lights, locks or thermostat from anywhere they have an Internet connection.

Control My Home also sends alerts to a user's cell phone or email when WH Security systems are triggered. Likewise, a user can create custom alerts or access video equipment based on their needs.

For example, one may want to be alerted when their child arrives home from school, when the medicine cabinet opens or when a specific house door is opened. Add-on features are available that can lock and unlock doors remotely or disarm your home's security system with just a touch of a cell phone button.

To save on energy use, a user can control, manage and schedule their home's energy use by utilizing an interactive web site and mobile phone applications to remotely access and control their home's thermostat and outlets both while occupied and away. Jeff Stephens of Minnetonka, Minn. began using Control My Home for thermostat energy management purposes in July 2012.

"I use Control My Home to control the thermostats in my cabin while I am away and it has been working wonderfully. I was interested in this new technology because the cabin is our secondary home and I like to be able to control the temperature of my cabin while we are home and away from it," said Stephens.

Control My Home services allow you remote access to your lights, locks and thermostat from any Internet connection.

Customers who use Control My Home, powered by Alarm.com, save money by reducing energy without sacrificing personal comfort.

"Using Control My Home services are great for all seasons. In the summer we use it to cool our cabin and in the winter to heat it. We usually do this on the long drive up so it is comfortable when we arrive," Stephens added.

Overall, the Control My Home security system provides instant notification; alerts and precise access to a user's property while they are away. The system is easy to use and can be suited exactly to an individual's preferences.

Protect your home from spring flooding with WH Security sensors

To help protect your home from water damage, WH Security offers notification devices that can protect you from water, moisture and flooding.

Flood sensors are placed in locations where water is most likely to accumulate in your home, such as near floor drains, pipes and fixtures. These sensors then detect the presence of water wherever they are mounted; giving you instant warning when water leakage or flooding occurs.

When the detector comes in contact with water, it signals an alarm to the panel in the home that alerts our monitoring center. From there, you will be notified immediately.

Another type of water sensor is a sump pump detector. A sump pump detector will activate once the water level is too high in the sump basket, causing it to send an alarm signal.

WH Security offers notification devices that can help protect your home from water damage this spring.

Why choose video surveillance for your home?

In a world full of uncertainty, protecting what's most valuable is important.

Surveillance cameras have redefined security and protection of one's home, family and valuables.

WH Security offers surveillance cameras for the home with the following advantages:

- See who is coming up your driveway, or the person at your front door, without them seeing you.
- Catch a potential burglar.
- Keep track of children.

Security cameras for the home have the following features:

- Through advancing technology, a user can connect to the Internet and access their system on-the-go or through a phone app.
- A user can record all motion, or only during certain times in the day.
- Video quality has improved.
