## CONTROL YOUR SYSTEM FROM YOUR SMART DEVICE

We do everything on our mobile phones these days, so why not control your security system too? With home automation products from WH Security and our mobile app, you can control your security system from anywhere there is an internet connection using your smartphone or tablet. Many products can be connected to your smart speakers, including Google Home and Amazon Alexa.

WH Security offers several Z-Wave devices that communicate with each other to build a more robust, mesh network. When set up throughout your home, these low-energy devices talk to each other by bouncing a signal back and forth from one device to another. The more Z-Wave devices you have, the stronger and faster your network is.

## AVOID UNFORSEEN COSTS WITH A SERVICE PLAN

You can minimize unforeseen costs associated with your security system by signing up for one of our three service plans. These plans cover some or all of the costs accrued during a service call and can help in the sudden need for maintenance.

WH Security's Basic service plan is \$7.95 per month and covers the trip and labor charges accrued during a service call. The Extended service plan is \$10.95 per month and includes free parts, trip and labor for up to 12 zones. The Extended Plus service plan is \$15.95 per month and includes free parts, trip and labor for 13 to 25 zones.

Examples of Z-Wave devices include door locks, lights, smart outlets and thermostats. With our door locks, you can lock and unlock your doors no matter where you are. This allows you to let a contractor into your home without giving away your password. You can also receive a notification every time someone at home locks and unlocks the door so you know when someone is coming and going.

Our thermostats allow you to raise or lower the temperature of your home even when you're not there from virtually any location. On a vacation? Manage your thermostat while away to save on energy costs, then turn the heat or air conditioning back on when you're returning.

If you have your own Z-Wave lights, our mobile app allows you to set unique lighting schedules to give the appearance that you are home even while you are away. (WH Security does not sell this type of lighting.)

WH Security cameras can also be viewed remotely so you can see what's happening at your property day or night. With our home automation options and mobile app, controlling your home is easy! Call 763.477.3664 to learn more.

All three service plans from WH Security include an optional free system check per year, which helps to ensure that your system is always in excellent working order. These affordable options from WH Security are a terrific value for both your security system and your budget.

Our custom-designed security systems put your mind at ease and alert you of intruders and environmental issues such as fire, freeze and flood. Adding a service plan helps protect you from unforeseen costs.

To inquire with WH Security, simply call (763) 477-3664 or email us at info@wh-security.com and we will be glad to explain your options in detail.

## WHY YOU NEED TO CHECK YOUR CO SENSORS

With the onset of cold weather, this is an important time of year to take precautions and protect your home from poisonous carbon monoxide (CO). But did you know that CO sensors have an average lifespan is 5-7 years? Look for a label on your existing CO detectors explaining how long they can be in operation. After this, failure or false alarms can occur, making the device unreliable.

Monitored CO sensors from WH Security will alert you if your environment becomes unsafe whether you are home or not. When a CO leak occurs, the sensor will activate the alarm panel and send a signal to the monitoring center. Then, professionals take action. They first try to reach the homeowner. If no one answers, they call the fire department to notify them of the issue, while continuing to try to reach the homeowner. If you have pets, having this device monitored is very important for their safety.

With a monitored CO sensor in your home, you get the added benefit of someone watching over you - whether you are home or not. Common sources of carbon monoxide gas include heaters, fireplaces and furnaces. Idling vehicles also produce CO, as well as ovens, clothes dryers and grills.

Remember to check and test your CO detectors regularly to ensure they are in proper working order. And make sure to keep your contact information current to ensuring the proper people are alerted should your alarm be set off.

## SAFE WINTER DRIVING TIPS

Winter driving can be treacherous and unnerving when streets become covered in snow and ice. You can take extra steps to help make a trip safer. At WH Security, our top priority is to help you protect what matters most, so we'd like to share some tips to help prevent motor vehicle injuries due to winter storms.

### PREPARE YOUR VEHICLE

In winter, pay attention to your vehicle's batteries, wipers, coolant and tires. You don't want any of those going bad when the snow is flying and temperatures are below freezing. When you are ready to go, clear snow and ice from your car, including the headlights and signals, and all windows.

### PREPARE YOURSELF

Drive slowly! It's harder to stop your vehicle on snow and ice. Increase your following distance and take the time to learn how your vehicle handles under winter driving conditions. Check the weather and traffic conditions before leaving and plan your route accordingly.

### PREPARE FOR AN EMERGENCY

No matter how prepared you are, accidents still happen and vehicles still break down. Make sure your vehicle is stocked with the proper emergency tools. These include jumper cables, flashlights, blankets, emergency lights or flares. You may also want to pack snacks like granola bars in case you get stranded and help is not close by.

## REFER A FRIEND AND GET \$50!

Refer your friends and receive a \$50 credit\* when they sign up to be protected by WH Security.

\*Certain restrictions may apply. Medical alerts are not included.
